

**In the Claims:**

1. (Original) A high voltage gallium nitride (GaN) transistor structure comprising:
  - a) a substrate;
  - b) a plurality of epitaxial layers deposited on the substrate and comprising:
    - i) a transitional layer deposited above the substrate;
    - ii) a sub-buffer layer deposited above the transitional layer and adapted to prevent electrons from entering the transitional layer and the substrate during high voltage operation; and
    - iii) a GaN buffer layer deposited above the sub-buffer layer; and
  - c) electrical contacts deposited on the plurality of epitaxial layers, thereby forming a high electron mobility transistor.
2. (Original) The structure of claim 1 wherein the sub-buffer layer is essentially aluminum nitride.
3. (Original) The structure of claim 1 wherein the plurality of epitaxial layers further comprise a Schottky layer deposited above the GaN buffer layer.
4. (Original) The structure of claim 3 wherein the Schottky layer is essentially aluminum gallium nitride.
5. (Original) The structure of claim 3 wherein the plurality of epitaxial layers further comprise a GaN termination layer deposited above the Schottky layer and adapted to protect the Schottky layer from surface reactions.
6. (Original) The structure of claim 5 wherein the GaN termination layer is further a reproducible termination layer, thereby increasing effectiveness of passivation.
7. (Original) The structure of claim 5 wherein the GaN termination layer is sufficiently thin to allow electrons to tunnel through the GaN termination layer.

8. (Original) The structure of claim 7 wherein the GaN termination is approximately 1-2 nanometers (nm) thick.
9. (Original) The structure of claim 1 wherein the contacts comprise a source contact, a gate contact, and a drain contact, further wherein the source, gate, and drain contacts are metallic.
10. (Original) The structure of claim 9 wherein a source-drain breakdown voltage is at least one-hundred (100) volts.
11. (Original) The structure of claim 1 wherein the transitional layer is deposited on the substrate, the sub-buffer layer is deposited on the transitional layer, and the GaN buffer layer is deposited on the sub-buffer layer.
12. (Original) The structure of claim 11 wherein the plurality of epitaxial layers further comprise:  
an aluminum nitride Schottky layer deposited on the gallium nitride buffer layer; and  
a GaN termination layer deposited on the Schottky layer.
13. (Original) A gallium nitride (GaN) transistor structure comprising:  
a) a substrate;  
b) a plurality of structural epitaxial layers deposited on the substrate and including a GaN buffer layer;  
c) a GaN termination layer deposited on the plurality of structural epitaxial layers and adapted to protect the plurality of structural epitaxial layers from surface reactions; and  
d) electrical contacts deposited on the GaN termination layer, thereby forming a high electron mobility transistor.
14. (Original) The structure of claim 13 wherein the GaN termination layer is further a reproducible termination layer, thereby increasing effectiveness of passivation.

15. (Original) The structure of claim 13 wherein the GaN termination layer is sufficiently thin to allow electrons to tunnel through the GaN termination layer.
16. (Original) The structure of claim 15 wherein the GaN termination is approximately 1-2 nanometers (nm) thick.
17. (Original) The structure of claim 13 wherein the plurality of structural epitaxial layers further comprise a transitional layer deposited above the substrate.
18. (Original) The structure of claim 17 wherein the GaN buffer layer is deposited above the transitional layer.
19. (Original) The structure of claim 18 wherein the plurality of structural epitaxial layers further comprise a Schottky layer deposited above the GaN buffer layer.
20. (Original) The structure of claim 19 wherein the Schottky layer is essentially aluminum gallium nitride.
21. (Original) The structure of claim 13 wherein the electrical contacts comprise a source contact, a gate contact, and a drain contact, further wherein the source, gate, and drain contacts are metallic.
- 22-25. (Cancelled)

## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ **BLACK BORDERS**
- ☐ **IMAGE CUT OFF AT TOP, BOTTOM OR SIDES**
- ☐ **FADED TEXT OR DRAWING**
- ☐ **BLURRED OR ILLEGIBLE TEXT OR DRAWING**
- ☐ **SKewed/SLANTED IMAGES**
- ☐ **COLOR OR BLACK AND WHITE PHOTOGRAPHS**
- ☐ **GRAY SCALE DOCUMENTS**
- ☒ **LINES OR MARKS ON ORIGINAL DOCUMENT**
- ☐ **REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY**
- ☐ **OTHER: \_\_\_\_\_**

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.**
